GOMYCODE · CHECKPOINT 2

Web Fundamentals

What happens behind every website, and how to build one.

BEDJEBOUDJA Fares Ali

MSc Computer Science — Software Engineering

GOMYCODE / Woolf

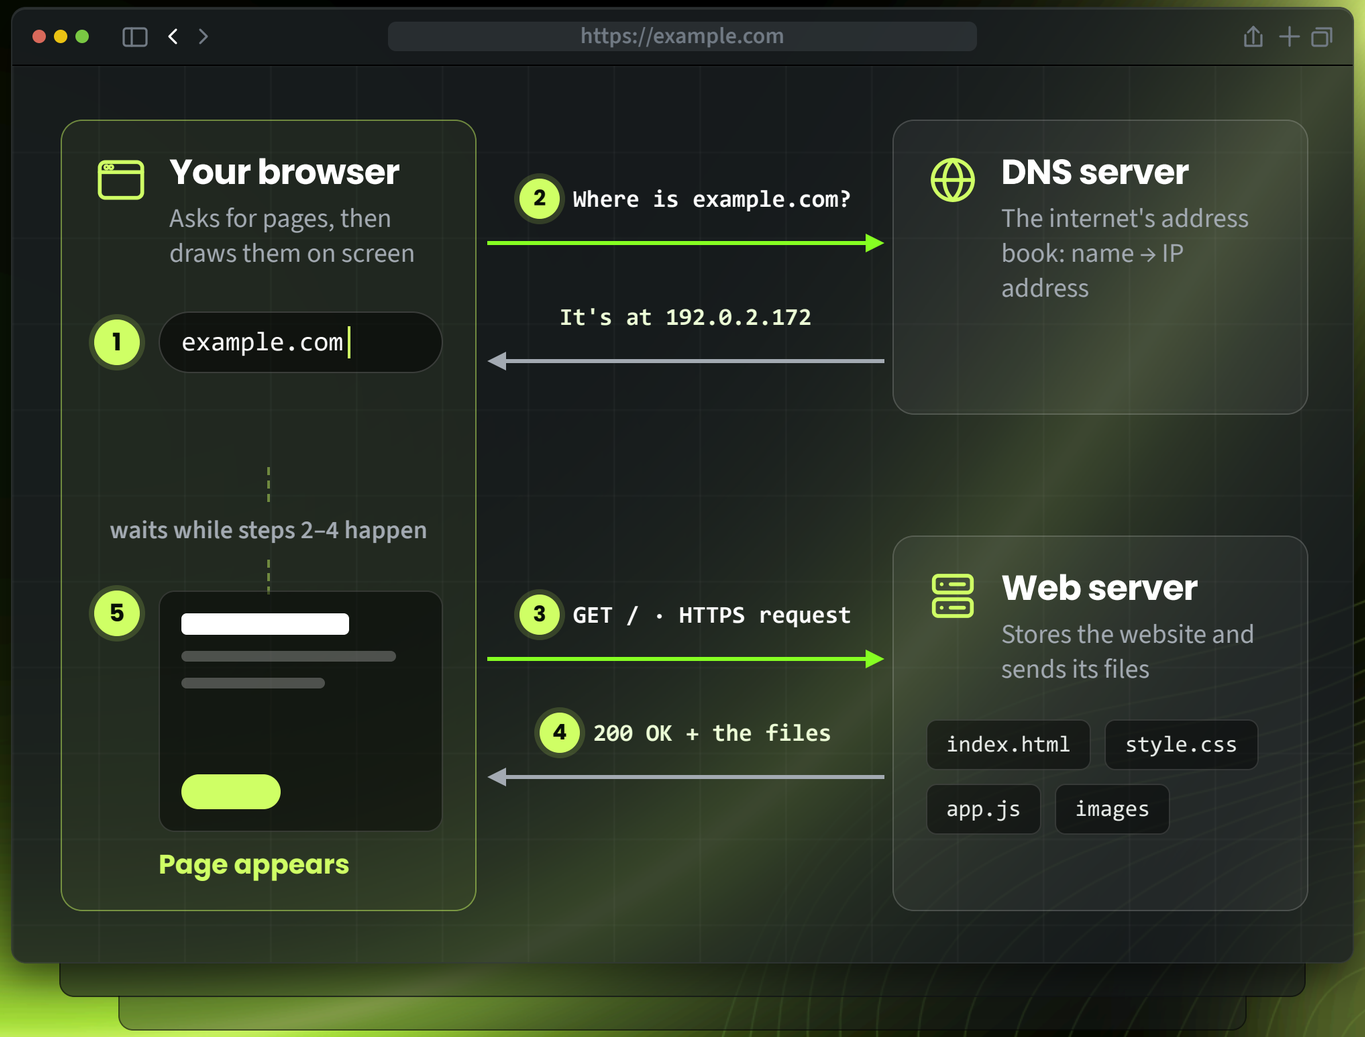

GOMYCODE

QUESTION 1 OF 3

How Does the Web Work?

1. **Enter a URL**
   You type a web address, like example.com.
2. **DNS lookup**
   The browser asks a DNS server for the site's IP address.
3. **Request**
   It sends an HTTPS request to the server at that address.
4. **Server response**
   The server sends back HTML, CSS, JavaScript and images.
5. **Browser rendering**
   The browser turns that code into the page you see.

QUESTION 2 OF 3

What Do You Need to Be a Web Developer?

Three languages to start, two sides to understand, and a few tools you use every day.

1 LEARN FIRST — Core web technologies

HTML
Structure and content

CSS
Appearance and layout

JavaScript
Behaviour and interactivity

Learn these first. Every website you visit is built with them.

2 UNDERSTAND — Two sides of a website

Frontend
The interface people see and use

Backend
Server logic, data and services behind it

Start with the frontend. Backend can come later. Nobody learns everything at once.

3 USE EVERY DAY — Tools and skills

- **Code editor** e.g. VS Code
- **Browser + DevTools** test and debug
- **Git** track changes
- **GitHub** share and collaborate

Problem-solving · Curiosity · Practice · Keep learning

QUESTION 3 OF 3

Why Did I Choose Web Development?

For me, it's about
turning ideas into software people use.

It's also where my MSc in Software Engineering becomes practical: I can apply what I study to real projects.

Thank You
